Qual-Craft® Industries' ENTERS THE HANGING SCAFFOLD market by forming an exclusive agreement with WallWalker...which offers end-users a quick and safe hanging scaffold work platform with Fall Protection

Named the WallWalker, this innovative scaffolding is more Flexible, Smarter and Creates a safe work platform for numerous job-site applications. The WallWalker has been engineered with features that will save time on the job, increase quality and productivity, and will save on workers compensation costs.

STOUGHTON, MA, January 15, 2007 -- National construction products company Qual-Craft Industries announces its new exclusive agreement with WallWalker, as the latest in a series of new products geared to the professional tradesman.

Build Smarter and Safer...

Long gone are the days of fall exposures due to walking the top-plate and trying to set up awkward scaffolding. WallWalker eliminates the need for makeshift scaffold and provides a quick and safe platform. Now with WallWalker's patented hanging scaffold system, you will save time and build smarter. With quick setup and easy adjustments, you can use the WallWalker for cutting tails, setting trusses, installing roof sheeting and fascia board. It is also used to do work on window & hurricane shutters, concrete walls, ships, piers and bridges, etc...With WallWalker's latest Mid-wall bracket assembly you can install the WallWalker system below the soffit line to install soffit as well.

WallWalker is the first hanging scaffold of its kind with light-weight aluminum construction.

WallWalker consists of brackets that unfold to hook over the top of the inside or outside of a wall and to support scaffold plank. The supports can be hung from a wall while standing on the ground, from a ladder, or from a window.

Each pair of WallWalkers are rated to support 500 lbs. evenly distributed, and there are no height restrictions as long as local and federal requirements are being met, says the company.

Horizontal plank support beams extend either 38 or 45 in. from the wall, depending on the model used, and handrail posts that support a toprail, midrail, and toeboards are included in the price.

To set the system up, you simply adjust the top plate hook to the proper wall width and hang it over the wall. The horizontal support beam accepts a variety of plank systems. Then you put the plank in place. The devices can be adjusted in height with or without removing the plank.

The system meets all OSHA requirements including Cal-OSHA.
